

Assistant Professor
Materials Science and Engineering Department &
Center for Advanced Construction Materials
at The University of Texas at Arlington

The Department of Materials Science and Engineering (MSE) and the Center for Advanced Construction Materials (CACM) at The University of Texas at Arlington (UTA) invite applications for a tenure-track assistant professor position with a focus on one or more of the following areas (but not limited to): (a) experimental, analytical, computational, and multiscale modeling of surface and interface phenomena; (b) design, synthesis, and characterization of multifunctional nanoengineered materials; and (c) electrochemical and chemomechanical phenomena with a focus on durability and sustainability of next-generation structural materials. Applicants must hold a Ph.D. in MSE or a related field and show exceptional promise for high-quality research, teaching, professional development, and the ability to build a recognized extramurally funded research program. Review of applications will begin immediately and will continue until the position is filled.

The MSE department and CACM house state-of-the-art laboratories, equipped to carry out pioneering materials research. Recently, the U.S. DoT has awarded UTA's University Transportation Center for Durable and Resilient Transportation Infrastructure a \$10 million grant for emerging materials, and technologies for reducing carbon emissions. Furthermore, NSF has just awarded the MSE department with a \$4.2 million grant on *Partnership for Research and Education in Functional Materials* providing additional opportunities to new faculty.

UTA's MSE department has been at the forefront of emerging materials technology by designing and discovering new materials, enabling advanced understanding of challenging material problems, and offering innovative curricula in nanotechnology, computational materials, and advanced functional materials. MSE at UTA is the oldest and most diversified program in North Texas. The MSE department is a university-wide, interdisciplinary, graduate program with ten core materials faculty and twenty affiliated faculty spanning from physics, chemistry, and engineering.

Candidates must hold a Ph.D. in Materials Science and Engineering or a related field. Applicants should go to <https://uta.peopleadmin.com/postings/25467> and submit their application, including a cover letter, curriculum vitae, statements of research and teaching objectives, and contact information for at least five references. Review of applications will begin immediately and will continue until the position is filled.

It is the policy of The University of Texas at Arlington (UTA or The University) to provide an educational and working environment that provides equal opportunity to all members of the University community. In accordance with federal and state law, the University prohibits unlawful discrimination, including harassment, on the basis of race, color, national origin, religion, age, sex, sexual orientation, pregnancy, disability, genetic information, and/or veteran status.
